

# Rain Garden

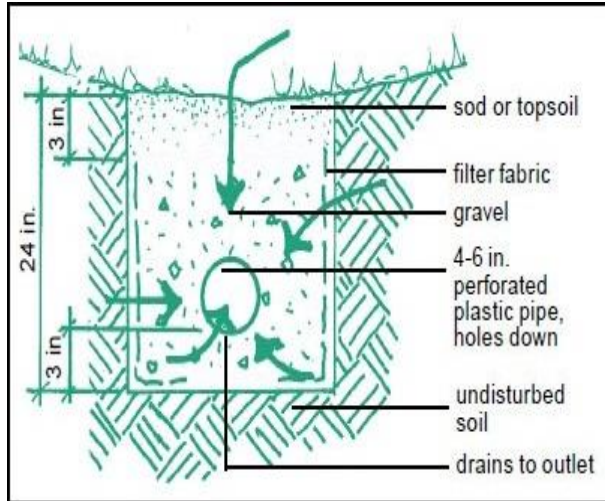

Water flowing off impervious surfaces (for example a roof or driveway) can be delivered to the rain garden through a swale lined with decorative rock or plants, through a pipe, or across a landscape area.

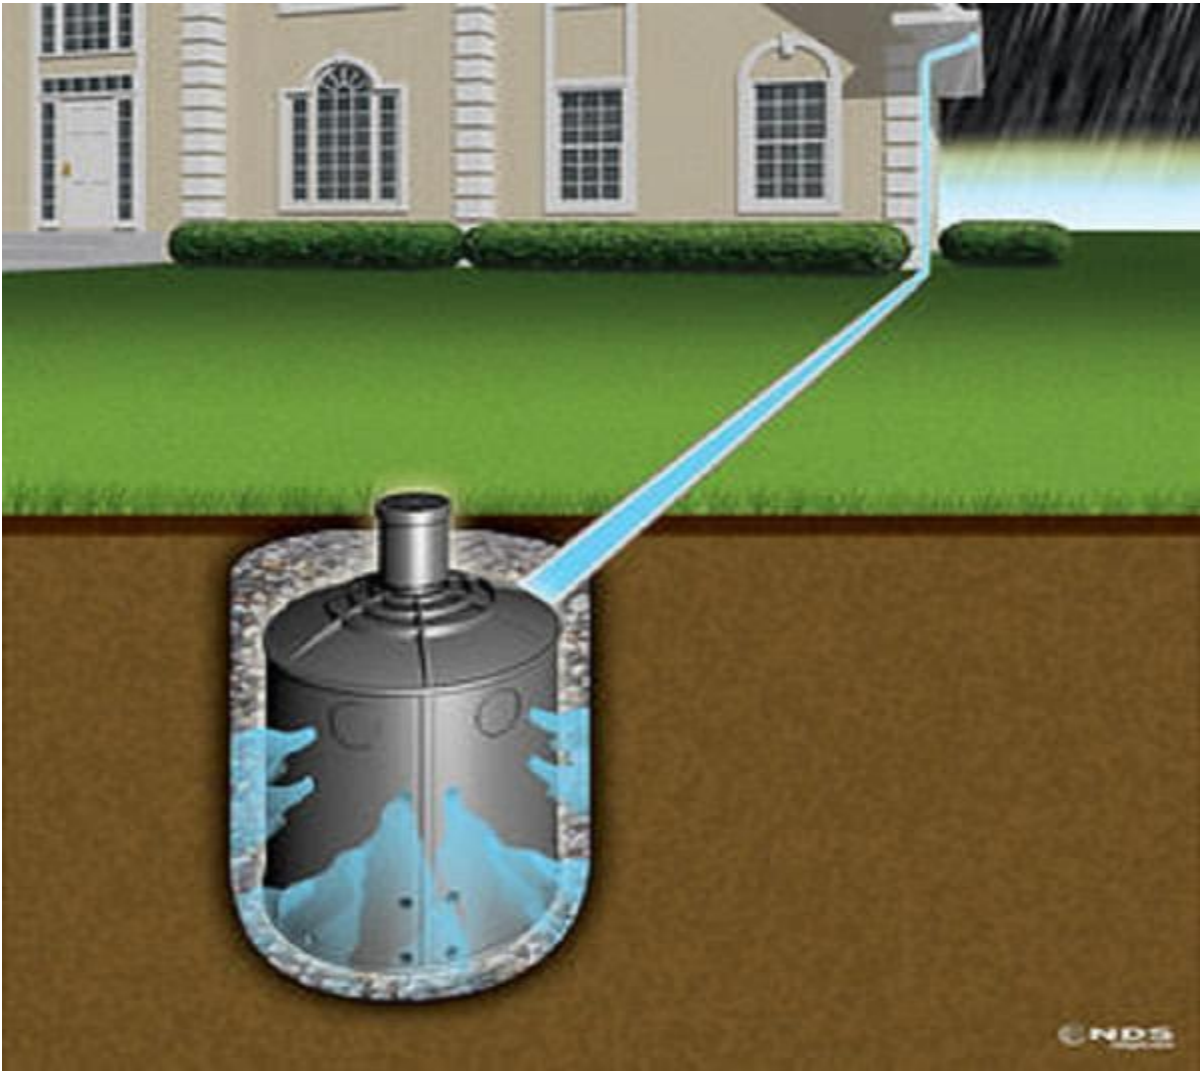

**LID 1.06** Infiltration Rain Garden with Planting Soil  
NTS

## FRENCH DRAIN

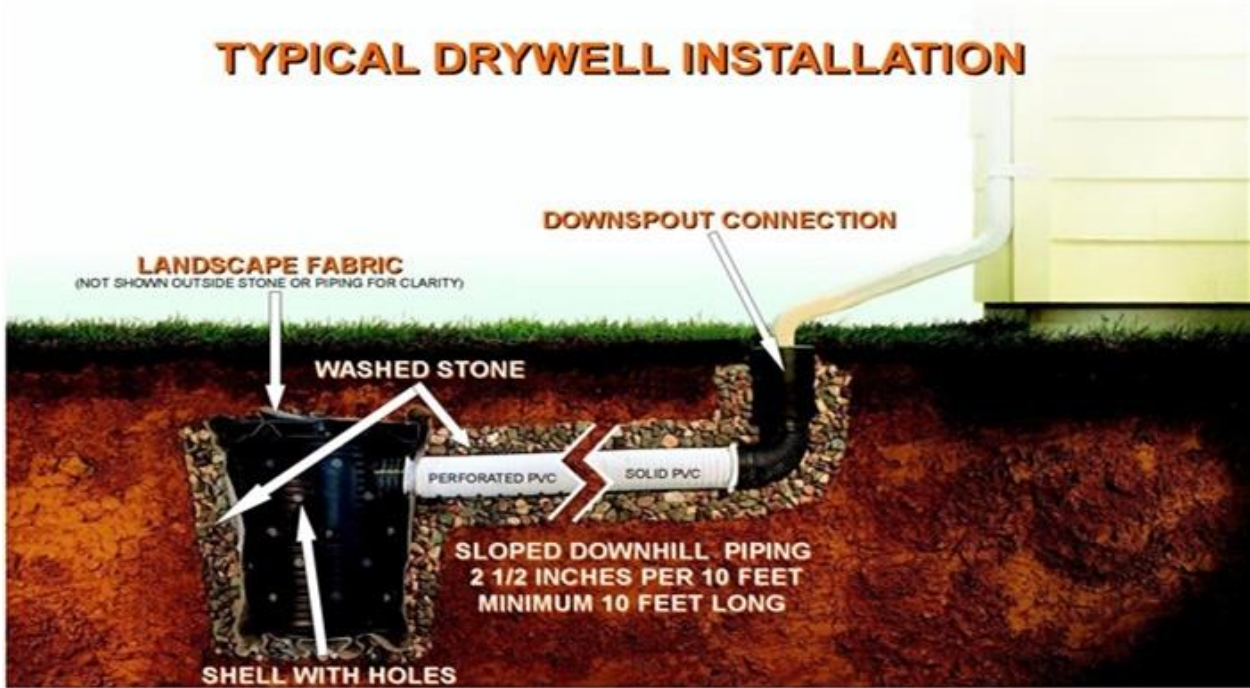

A standard French drain ditch is about 1.5 feet deep and 10-12 inches wide, varying based on the size of the pipe chosen (usually 4-6 inches) and the desired depth.

Dry well surrounded by clean rock and overflow valve/observation port.

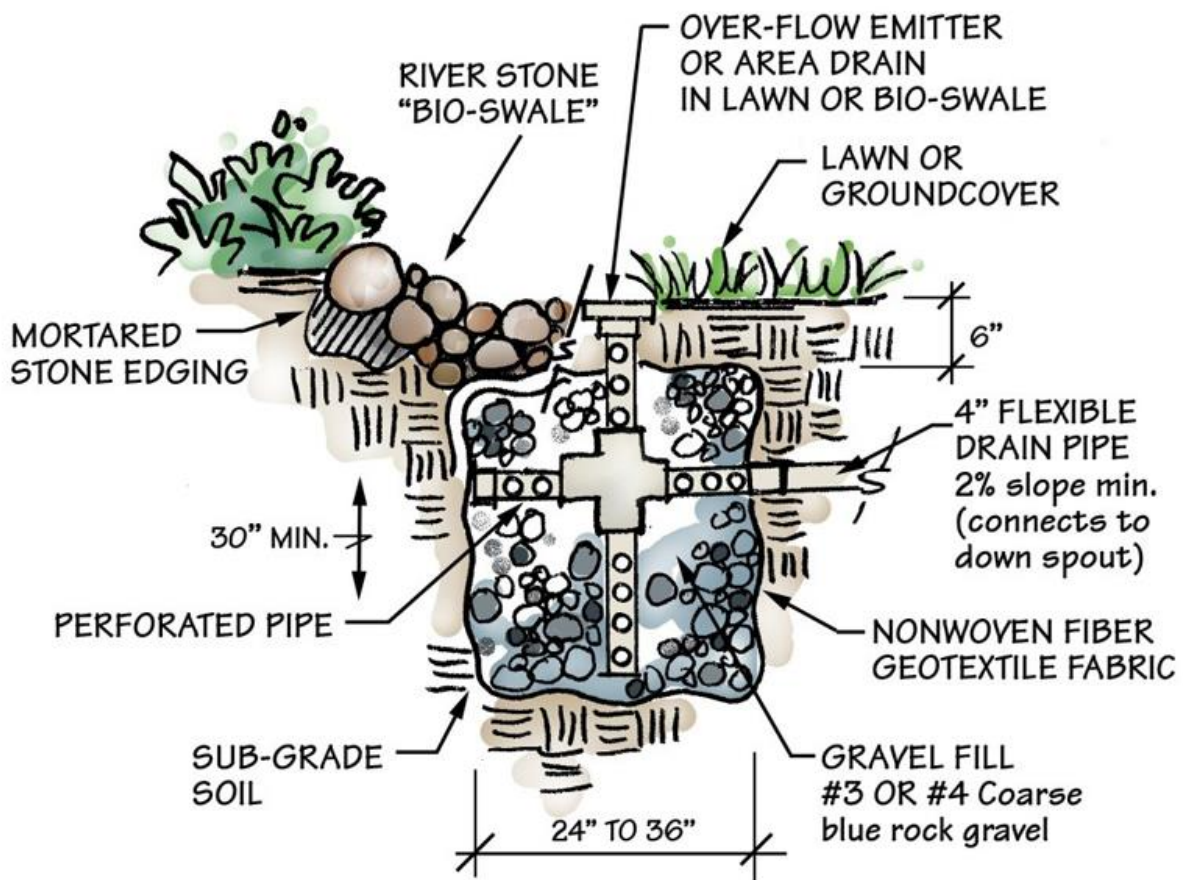

### TYPICAL DRYWELL INSTALLATION

## Dry well with infiltration trench

## Dry well with gravel fill and bio-swale.
